

Frontend Implementation Plan

Phase 1 · React Frontend · 5 Developers · 29 Pages

Build order →

Page distribution

Phase 0 · Jonathan

Foundation first — no one can start without this

- Set up React + Vite project, configure routing and role guards
- Build the full design system: colors, fonts, Button, Input, Card, Sidebar, Topbar
- Build Login + Register pages with JWT/session handling
- Build Admin Dashboard shell — then Logs, Settings, Reports

Phase 1 · All 4 devs in parallel

After Jonathan publishes the design system

- Seliem → 6 Instructor pages (Course Wizard, Lectures, Stream, Analytics, Assignments, Announcements)
- Magdy → 7 Student pages (Dashboard, Courses, Grades, Calendar, Submissions, Profile, Settings)
- Basel → 4 Communication pages (Inbox, Notifications, Landing, Docs)
- Yassin → 4 pages (User Management, Roster) + support Seliem & Magdy

Phase 2 · Everyone

Integration, testing, and final review

- Connect all pages via shared routing with role-based access guards
- Test each role: Admin / Instructor / Student cannot access each other's pages
- Verify Seliem's courses flow into Magdy's student enrollment screens
- Final merge, browser testing, and handoff to backend team for Phase 2

Jonathan

Architecture & Admin Core

6 pages

Starts after:

No dependency — Jonathan starts first

How to start — step by step

- 1 Set up the React project**
Vite, folder structure, routing, role-based guards
- 2 Build the design system**
Colors, fonts, Button, Input, Card, Sidebar, Topbar
- 3 Build Login & Register pages**
JWT/session logic, form validation, redirect by role
- 4 Build Admin pages**
Dashboard → System Logs → Settings → Reports

1 Login / Register

Auth entry point for all roles

2 Design System

Shared components for the team

3 Admin Dashboard

Hub with analytics & charts

4 System Logs

Real-time event monitor

5 System Settings

Global config & branding

6 Admin Reports

Institutional report engine

Seliem

Instructor Suite & Course Management

6 pages

Starts after:

Jonathan finishes the design system

How to start — step by step

- 1 Wait for Jonathan's design system**
Use shared Sidebar, Button, Card, Input components
- 2 Build the Course Creation Wizard**
Step 1 form → Step 2 form — they are one connected flow
- 3 Build Inside Course pages**
Lectures tab first, then Stream tab
- 4 Build instructor tools last**
Analytics dashboard → Assignment panel

1 create_course_step_1

Course basic info form

2 create_course_step_2

Schedule & cover image

Magdy

Student Workspace & Performance

7 pages

Starts after:

Jonathan finishes the design system

How to start — step by step

- 1 Use Jonathan's design system**
Sidebar, Card, and shared layout — already built
- 2 Start with the Student Dashboard**
The first page students see after login
- 3 Build the course-facing pages**
My Courses grid → Inside course grade tab
- 4 Build academic tools last**
Grades, Calendar, Submissions, Profile

1 student_dashboard

Personal hub & progress bars

Communication & Messaging

4 pages

Starts after:

Jonathan finishes the design system

How to start — step by step

- 1 Use Jonathan's design system**
Shared components for layout and UI
- 2 Build the Inbox first**
Most complex page: threading, unread state, search
- 3 Build Notifications**
Simpler list — reuses inbox patterns
- 4 Build the Landing Page**
Static marketing page — no auth required

1 messages_inbox

Full threaded inbox

2 notifications_view

System notifications feed

3 landing_page

Public marketing page

4 PRD documentation

Maintain project docs

Yassin

User Management & Roster Support

4 pages

Starts after:

Jonathan finishes the design system

How to start — step by step

- 1 Use Jonathan's design system**
All components already built — focus on wiring
- 2 Build User Management**
Standard CRUD: list, create, edit, deactivate users
- 3 Build the Course Roster**
Student list inside a course with grades and progress
- 4 Support Seliem & Magdy**
Help with repetitive component styling tasks

1 user_management

Admin CRUD user panel

2 inside_course_students

Student roster in course

3 Component support

Help Seliem on UI tasks

4 Component support

Help Magdy on UI tasks
